## Config files

### Create config file

To create a configuration file, you need to select "New config file" from the "File" menu. Choose a file name and save in the desired folder. A JSON file will be created. The program will prompt you to select the file as current. A test entry will be created in the new file. this means that the creation of the file was successful and the file is ready to work. IMPORTANT! Restart the application for the changes to take effect.

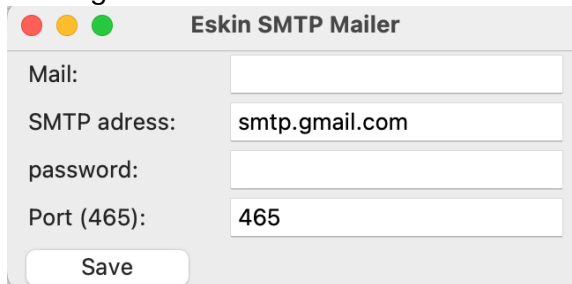

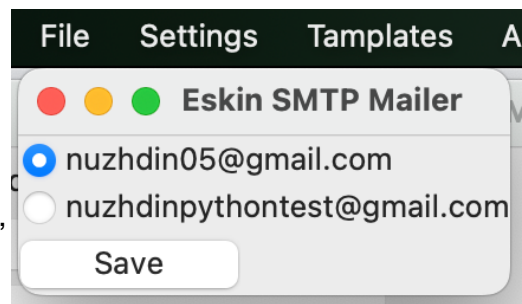

### Change config file

To change the current config file, select "Choose config file" from the "File" menu. After that, select the desired JSON file. The system will show a notification about changing the current file. this means that a new file has been selected and this file is ready to work. IMPORTANT! Restart the application for the changes to take effect.

# Senders

## Choose sender

to select the sender of letters, you need to select the "Choose sender" item in the "Settings" menu. In the window that opens, you will be asked to select a sender from those who are added to the config file. After saving, the system will notify you about the change of the sender. the new sender will be entered in the "Sender" field. IMPORTANT! Restart the application for the changes to take effect.

## Add sender

To add a new sender, select "Add sender" in the "Settings" menu. In the window that opens, you need to fill in all the fields. You can find out how to get a password from the application at the link <https://support.google.com/accounts/answer/185833?hl=en> you can use other SMTP servers

## Delete Sender

You can also remove the sender from the config file. To do this, select "Delete Sender" from the "File" menu. in the window that opens, select the sender you want to delete. The sender will be removed from the config file and will no longer be available

# Receivers

## Receivers line

You can use the email input line to add recipients. Write emails separated by commas. Each recipient will receive a separate email

Sender: nuzhdin05@gmail.com

Send to: test@rec.1,test@rec.2|

## Load from CSV

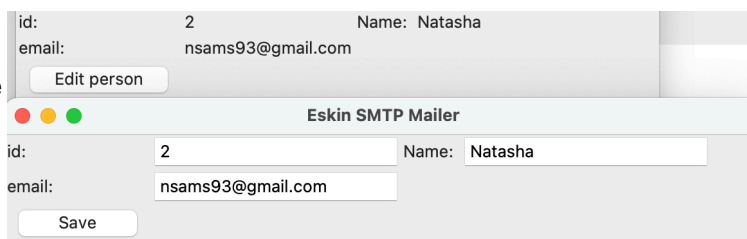

You can load recipients from a file. This is also suitable for further work with keywords. To load from a file, you need to click on the "From

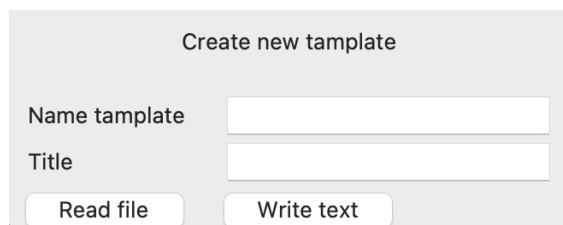

CSV" button on the main screen, select the desired file and specify the name of the column containing the recipients' email addresses. IMPORTANT: Columns in the CSV file must be separated by a comma separator. If the download is successful, the system will notify you of the number of downloaded recipients and a list of all recipients will appear on the main screen

## Change receivers

If you want to change the recipient's parameters, you can do this by selecting the desired user and pressing "Enter". In a new window you will see sender parameters. Click the «Edit person» button, make the necessary changes, and then click "Save". All changes will be saved

## Templates

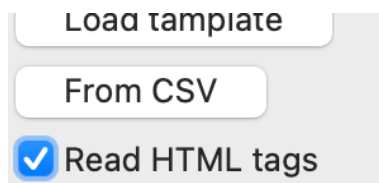

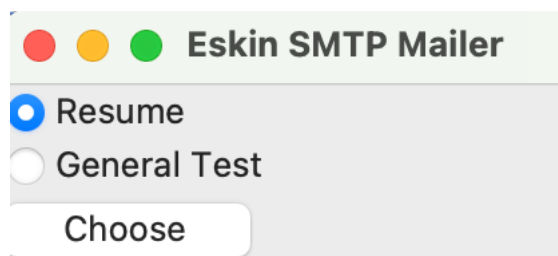

### Create template

To create a new template, select "New Template" from the "Templates" menu. In the window that opens, you need to enter the name of the template and the title of the letter. You can enter the text of the letter yourself or read it from a file. Click "Save" to save the changes.

### Choose templates

To use a letter template, you need to click on the "Load Template" button on the main screen or select the "Choose Template" item in the "Templates" menu. In the window that opens, select a template from previously saved ones and click "Select". The text of the template and the subject of the letter will immediately appear on the main page

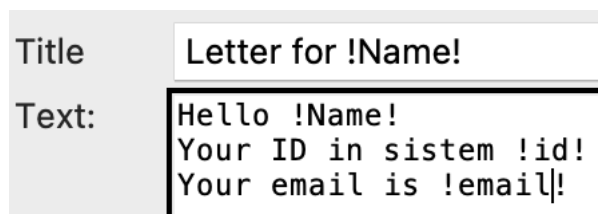

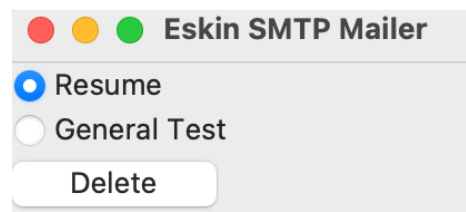

### HTML tags

For greater beauty and presentability of your letter, you can use HTML tags. To read and correctly display HTML tags, you need to check the box "Read HTML tags" on the main window

### Delete templates

To delete a template, select "Delete Template" from the "Templates" menu. In the menu that opens, select a template by name and click "Delete". The selected template will be deleted

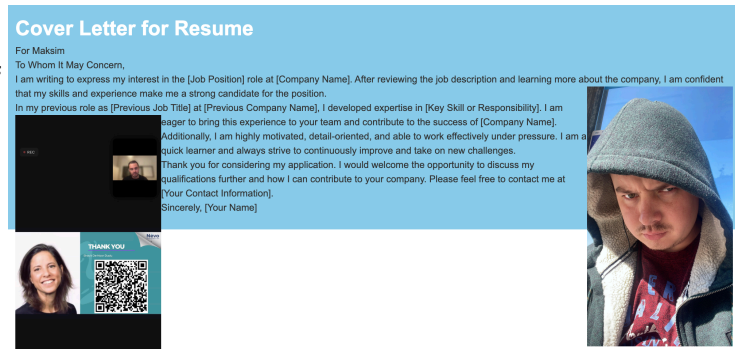

### Key words

The use of keywords is possible only when loading recipients from a CSV file. To insert values by key, use the construction "!Key!", where "key" is the name of the column in the CSV file. For example "Good evening,! Name!". In this case, instead of "! Name!" the names of the recipients corresponding to the emails will be used. For example "Good evening Jack»

## Images

If you want to use images in the body of an email, you can only do so using HTML tags. use the keyword "my\_img1", "my\_img2", "my\_img3", where the number corresponds to the sequence number of the image loaded in «Body file». For example ""

## Files

### Attach files

To attach files to an email, use the "Select File" button at the bottom of the main screen. On the right you will see the number of attached files

Select file

Selected 0 files

### Body files

If you want to attach images to the body of your email, use the "Body Files" button at the bottom of the main screen. On the right you will see the number of attached files

Body file

Selected 0 files

## Send

After completing the settings of all the parameters of your newsletter, click on the "Send" button at the bottom of the page. Sending messages will be started. Between each letter, a pause of 1-5 seconds is made to reduce the likelihood of the letter getting into the "Spam" folder

SEND

## History

To view the history of sent messages, select "View Journal" from the "File" menu. In the window that opens, you will see all sent messages. you can also fake entries by any of the parameters. To view the details of an entry, select the one you want and press «Enter»
